

HIV-1₄₅₁ gp160

ABL, INC.

Catalog Number:	5427
Quantity:	100 µg
Source:	The conditioned medium of HIV-1 ₄₅₁ infected cells. The gp160 is secreted in the medium. The protein is an oligomer and is probably truncated near the transmembrane domain and runs as a 140 kDa protein in SDS-PAGE.
Inactivation	The medium was inactivated with 0.5% Triton X-100 which
Procedure:	has been shown to inactivate HIV-1.
Purity:	Purified by immunoaffinity chromatography using mouse monoclonal antibody to HIV-1 gp41. This preparation is free of endotoxin.
Storage:	Store at -70°C
